
a
MLP_L trained on choices13k experience
500 probes, colour = probability of the risky gain
A summary
A outcomes
P(loss) of B
n outcomes B
extremes of B
SD of B
SD difference
correlation
EV difference
B outcomes
EV of B
p
Shapley value (probe-level)
b
one point per trained model (5 archs x 5 seeds)
model-level attribution
EV difference (normalised)
c13k exp
c13k desc
CPC18 exp
CPC18 desc
c
dependence: thick line = binned mean per arm
Shapley value
actual EV difference (B − A)
d
conditional on where in probability space
p<=.05 gain +0.012 +0.011 +0.005 +0.005
p<=.05 loss -0.007 -0.006 -0.002 -0.001
